**Hull Identification Number**

- The Hull Identification Number (HIN) is located on the starboard side of the transom.
- Record the HIN (and the engine serial numbers) in the space provided above.
- Include the HIN with any correspondence or orders.

Hazard Boxes & Symbols

The hazard boxes and symbols shown below are used throughout this Supplement to call attention to potentially dangerous situations which could lead to either personal injury or product damage. Read ALL warnings carefully and follow all safety instructions.

⚠️ ⚠️ ⚠️ DANGER!

This box alerts you to immediate hazards which WILL cause severe personal injury or death if the warning is ignored.

⚠️ ⚠️ ⚠️ WARNING!

This box alerts you to hazards or unsafe practices which COULD result in severe personal injury or death if the warning is ignored.

⚠️ ⚠️ ⚠️ CAUTION!

This box alerts you to hazards or unsafe practices which COULD result in minor personal injury or cause product or property damage if the warning is ignored.

NOTICE

This box calls attention to installation, operation or maintenance information, which is important to proper operation but is not hazard related.
Chapter 1: Welcome Aboard!

This Owner’s Manual Supplement provides specific information about your boat that is not covered in the Cruiser & Yacht Owner’s Manual. Please study the Cruiser & Yacht Owner’s Manual and this Supplement carefully. Keep the Cruiser & Yacht Owner’s Manual and this Supplement on your boat in a secure, yet readily available place.

Dealer Service

- Ask your dealer to explain all systems before taking delivery of your boat.
- Your dealer is your key to service.
- Contact your dealer if you have any problems with your new boat.
- If your dealer cannot help, call our customer service hotline: 360-435-8957 or send us a FAX: 360-403-4235.
- Buy replacement parts from any authorized Bayliner dealer.

Warranty Information

- Bayliner offers a Limited Warranty on each new Bayliner purchased through an authorized Bayliner dealer.
- A copy of the Limited Warranty was included in your owner’s packet.
- If you did not receive a copy of the Limited Warranty, please contact your dealer or call 360-435-8957 for a copy.
Boating Experience

**WARNING!**

**CONTROL HAZARD!**

A qualified operator must be in control of the boat at all times. DO NOT operate your boat while under the influence of alcohol or drugs.

If this is your first boat or if you are changing to a type of boat you are not familiar with, for your own comfort and safety, obtain handling and operating experience before assuming command of the boat.

Take one of the boating safety classes offered by the U.S. Power Squadrons or the U.S. Coast Guard Auxiliary. For more course information, including dates and locations of upcoming classes, contact the organizations directly:

- U.S. Power Squadrons: 1-888-FOR-USPS (1-888-367-8777) or on the Internet at: http://www.usps.org
- U.S. Coast Guard Auxiliary: 1-800-368-5647 or on the Internet at: http://www.cgaux.org

Outside the United States, your selling dealer, national sailing federation or local boat club can advise you of local sea schools or competent instructors.

**Engine & Accessories Guidelines**

**NOTICE**

When storing your boat please refer to your engine’s operation and maintenance manuals.

- Your boat’s engine and accessories were selected to provide optimum performance and service.
- Installing a different engine or other accessories may cause unwanted handling characteristics.
- Should you choose to install a different engine or to add accessories that will affect the boat’s running trim, have an experienced marine technician perform a safety inspection and handling test before operating your boat again.

Certain modifications to your boat can result in cancellation of your warranty protection. Always check with your dealer before making any modifications to your boat.

**Engine & Accessories Literature**

- The engine and accessories installed on your boat come with their own operation and maintenance manuals.
- Read and understand these manuals before using the engine and accessories.
- Unless noted otherwise, all engine and accessory literature referred to in this Supplement is included in your owner’s packet.

**Structural Limitations**

The transom platform and bow platform are designed to be lightweight for proper boat balance. The load limit for these platforms is 30 pounds per square foot, evenly distributed.
Safety Standards

⚠️ DANGER!

FALLING and ROTATING PROPELLER HAZARD!

NEVER allow anyone to ride on parts of the boat not designed for such use.

- Sitting on seat backs, lounging on the forward deck, bow riding, gunwale riding or occupying the transom platform while underway is especially hazardous and will cause personal injury or death.

⚠️ DANGER!

ROTATING PROPELLER and CARBON MONOXIDE POISONING HAZARD!

- NEVER allow anyone to occupy, or hang from, the back deck or swim platform while the engine(s) are running.
- Teak surfing, dragging, or water skiing within 20 feet of a moving watercraft can be fatal.

⚠️ DANGER!

PERSONAL SAFETY HAZARD!

ALWAYS secure the anchor and other loose objects before getting underway. The anchor and other items that are not properly secured can come loose when the boat is moving and cause personal injury or death.

- Your boat’s mechanical and electrical systems were designed to meet safety standards in effect at the time it was built.
- Some of these standards were mandated by law, all of them were designed to insure your safety, and the safety of other people, vessels and property.

In addition to this Owner’s Manual Supplement, please read the Cruiser & Yacht Owner’s Manual and all accessory instructions for important safety standards and hazard information.

Qualified Maintenance

⚠️ WARNING!

To maintain the integrity and safety of your boat, allow only qualified personnel to perform maintenance on, or in any way modify: The steering system, propulsion system, engine control system, fuel system, environmental control system, electrical system or navigational system.

- Failure to maintain your boat’s systems (listed in the warning above) as designed could violate the laws in your jurisdiction and could expose you and other people to the danger of bodily injury or accidental death.
- Follow the instructions provided in the Cruiser & Yacht Owner’s Manual, this Owner’s Manual Supplement, the engine owner’s manual and all accessory instruction sheets and manuals.
Special Care For Moored Boats

**NOTICE**
- To help seal the hull bottom and reduce the possibility of gelcoat blistering on moored boats, apply an epoxy barrier coating. The barrier coating should be covered with several coats of anti-fouling paint.
- Many states regulate the chemical content of bottom paints in order to meet environmental standards. Check with your local dealer about recommended bottom paints, and about the laws in effect in your area.

- Whether moored in saltwater or freshwater, your boat will collect marine growth on its hull bottom.
- This will detract from the boat’s beauty, greatly affect its performance and may damage the gelcoat.
- Periodically haul the boat out of the water and scrub the hull bottom with a bristle brush and a solution of soap and water.

Sacrificial Anodes (Zincs)

**NOTICE**

*Do not paint between the zinc and the metal surface it contacts and do not paint over the zins.*

Your boat is equipped with sacrificial anodes (zincs) to protect underwater metal parts from excessive deterioration. Check the zincs regularly and replace them if they have deteriorated more than 70%.

There are many factors that affect the rate at which the zincs deteriorate, including:
- Water temperature
- Salinity
- Water pollution

Stray electrical current from the boat or dock may cause complete deterioration in just a few weeks. If there is rapid zinc deterioration, measure the electrolytic corrosion around your boat with a Corrosion Test Meter. If the zincs are not bonded correctly, they will not provide protection.
Carbon Monoxide (CO)

**DANGER!**
- Carbon monoxide gas (CO) is colorless, odorless, tasteless, and extremely dangerous.
- *All* engines, generators, and fuel burning appliances produce CO as exhaust.
- Prolonged exposure to low concentrations or very quick exposure to high concentrations will cause BRAIN DAMAGE or DEATH.
- Teak surfing, dragging, or water skiing within 20 feet of a moving watercraft can be fatal.

**Facts about CO**
- CO poisoning causes a significant number of boating deaths each year.
- Called the "silent killer", CO is an extremely toxic, colorless, odorless and tasteless gas.
- CO can harm or even kill you inside or outside your boat.
- CO can affect you whether you’re underway, moored, or anchored.
- CO symptoms are similar to seasickness or alcohol intoxication.
- CO can make you sick in seconds. In high enough concentrations, even a few breaths can be fatal.
- Breathing CO blocks the ability of your blood to carry oxygen.
- The effects are cumulative, even low levels of exposure can result in injury or death.

**Factors That Increase the Effects of CO Poisoning**
- Age
- Smokers or people exposed to high concentrations of cigarette smoke
- Consumption of alcohol
- Lung disorders
- Heart problems
- Pregnancy
Where and How CO Can Accumulate

Stationary Conditions That Increase CO Accumulations Include:

- A. Using engine, generator, or other fuel burning device when boat is moored in a confined space.
- B. Mooring too close to another boat that is using its engine, generator, or other fuel burning device.

To correct stationary situations A and/or B:
- Close all windows, portlights and hatches.
- If possible, move your boat away from source of CO.

Running Conditions That Increase CO Accumulations Include:

- C. Running boat with trim angle of bow too high.
- D. Running boat without through ventilation (station wagon effect).

To correct running situations C and/or D:
- Trim bow down.
- Open windows and canvas.
- When possible, run boat so that prevailing winds help dissipate exhaust.

How to Protect Yourself and Others From CO

- Know where and how CO may accumulate in and around your boat (see above).
- Maintain fresh air circulation throughout the boat at all times.
- Know where your engine and generator exhaust outlets are located and keep everyone away from these areas.
- Never sit on, or hang onto, the back deck or swim platform while the engine(s) are running.
- Never enter the areas under swim platforms where exhaust outlets are located.
- Although CO can be present without the smell of exhaust fumes, if exhaust fumes are detected on the boat, take immediate action to dissipate these fumes.
- Treat symptoms of seasickness as possible CO poisoning. Get the person into fresh air immediately. Seek medical attention—unless you’re sure it’s not CO.
- Install and maintain CO alarms inside your boat. Do not ignore any alarm. Replace alarms as recommended by the alarm manufacturer.
- Follow the checklists provided on the next page.
- Get a Vessel Safety Check.

For information on how to get a free VESSEL SAFETY CHECK, visit www.vesselsafetycheck.org or contact your local U.S. Coast Guard Auxiliary or United States Power Squadrons®.
- U.S. Coast Guard Auxiliary: 1-800-368-5647 or on the Internet at: http://www.cgaux.org
- U.S. Power Squadrons: 1-888-FOR-USPS (1-888-367-8777) or on the Internet at: http://www.usps.org
Trip Checklist

- Make sure you know where the exhaust outlets are located on your boat.
- Educate all passengers about the symptoms of CO poisoning and where CO may accumulate.
- When docked, or rafted with another boat, be aware of exhaust emissions from the other boat.
- Confirm that water flows from the exhaust outlet when the engines and generator are started.
- Listen for any change in exhaust sound, which could indicate an exhaust component failure.
- Test the operation of each CO alarm by pressing the test button.

Monthly Checklist

- Make sure all exhaust clamps are in place and secure.
- Look for exhaust leaking from exhaust system components. Signs include rust and/or black streaking, water leaks, or corroded or cracked fittings.
- Inspect rubber exhaust hoses for burned, cracked, or deteriorated sections. All rubber hoses should be pliable and free of kinks.

Annual Checklist

Have a Qualified Marine Technician:

- Replace exhaust hoses if cracking, charring, or deterioration is found.
- Ensure that your engines and generators are properly tuned, and well maintained.
- Inspect each water pump impeller and the water pump housing. Replace if worn. Make sure cooling systems are in working condition.
- Inspect all metallic exhaust components for cracking, rusting, leaking, or loosening. Make sure they check the cylinder head gasket, exhaust manifold, water injection elbow, and the threaded adapter nipple between the manifold and the elbow.
- Clean, inspect, and confirm proper operation of the generator cooling water anti-siphon valve (if equipped).

Carbon Monoxide Alarm System

⚠️ DANGER!

CARBON MONOXIDE POISONING HAZARD!

- The house battery switch must be in the On position for the CO Monitors to work.

⚠️ NOTICE

The stereo memory and CO monitor(s) place a small, but constant drain on the battery. If your boat will be unattended for an extended amount of time, plug into shore power with the battery charger turned On, or disconnect the battery if shore power is not an option.

- Your boat features a carbon monoxide (CO) alarm system.
- Do not disconnect the alarm system.
- Read and understand the manufacturer’s instructions for your CO alarm system. If you did not receive an instruction manual, call (800) 383-0269 and one will be mailed to you.

If your boat is not equipped with a carbon monoxide alarm, consider purchasing one from your dealer or marine supply store.
More Information

For more information about how you can prevent carbon monoxide poisoning on recreational boats and other ways to boat more safely, contact:

**Typical Helm Layout Shown**
Actual layout may vary depending on engine and accessory options.
Component Locations

12-Volt Accessory Outlet: At the helm on the dash panel.
Air Conditioner Seawater Intake Seacock: Under the cabin entry step.
Air Conditioner Unit: In the V-berth. Access is through the starboard aft V-berth hatch.
Battery: On the starboard side of the engine room, aft of the battery charger.
Battery Charger: On the starboard side of the engine room.
Battery Switch: Inside the storage compartment, under the helm seat.
Bilge pump - Aft: In the engine compartment.
Bilge pump - Forward: Under cabin entry step.
Carbon Monoxide Detector: In the cabin on the starboard aft dinette wall.
DC Circuit Breakers: At the helm, under the dash.
Engine Circuit Breaker: On the engine.
Fuel Fill: On the starboard aft corner of the deck.
Fuel Tank: In the engine compartment forward of the engine.
Macerator Underwater Discharge Seacock: Inside the engine room.
Navigation Lights: Red and green lights at the bow. White all-around light on the hardtop.
Waste Holding Tank: Access is through the center floor hatch in the cockpit.
Water Fill: On the starboard side deck.
Water Heater: In the center floor hatch in the cockpit, to the left of the holding tank.
Water Pump: Inside the center floor hatch in the cockpit, next to the water/holding tanks.
Water Pump Switch: Inside the cabin, at the galley, to the left of the galley faucet.
Water Tank: Access is through center floor hatch in the cockpit.
Engine

The owner’s packet contains detailed engine operation and maintenance manuals. Be sure to read and understand these manuals before starting or doing any maintenance on the engine.

Engine Room Ventilation System

**WARNING!**

**FIRE/EXPLOSION HAZARD**
- Use of the blower system is NOT A GUARANTEE that explosive fumes have been removed.
- If you smell fuel, **DO NOT** start the engine and **DO NOT** turn on any electrical devices.
- If you smell fuel and the engine is already running, **SHUT OFF** the engine and **TURN OFF** all electrical devices. Investigate immediately.
- **DO NOT** obstruct or modify the ventilation system.

- The bilge blower removes explosive fuel fumes from the engine compartment.
- Fresh air is drawn into the compartment through the deck vents.
- The bilge blower switch is at the helm.

To make sure the engine compartment is ventilated with fresh air, run the bilge blower:
- For at least four minutes before starting the engine.
- During starting.
- Anytime your boat is running below cruising speed.
Fuel System

**WARNING!**

**FIRE, EXPLOSION AND OPEN FLAME HAZARD!**

- It is very important that the fuel system be inspected thoroughly the first time it is filled and at each subsequent filling.
- The fueling instructions in the *Cruiser & Yacht Owner’s Manual* and the fuel recommendations in the engine operation manual must be followed.

**CAUTION**

Avoid the storage or handling of gear near the fuel lines, fittings and tank.
Fuel Fill and Vent
- The fuel fill fitting is marked “GAS”.
- The fuel tank vent is located below the fuel fill.
- If you experience difficulty filling the fuel tank, check to see if the fuel fill hose or vent hose is kinked or collapsed. If there are no visible signs of a problem, contact your local dealer.

Fuel Filters
- The fuel pickup tube (located inside the fuel tank) is equipped with a fine mesh screen filter.
- Also, when supplied by the engine manufacturer, a fuel filter is installed on the engine.
- Periodically replace the fuel filters to make sure they remain clean and free of debris.
- Ask your dealer about fuel additives that help prevent fungus or other buildup in your fuel tank.

Anti-siphon Valve

<table>
<thead>
<tr>
<th>NOTICE</th>
</tr>
</thead>
<tbody>
<tr>
<td>• If an engine running problem is diagnosed as fuel starvation, check the anti-siphon valve. If the valve is stuck or clogged, change or replace it while the engine is shut down.</td>
</tr>
<tr>
<td>• NEVER run the engine with the anti-siphon valve removed, except in an emergency.</td>
</tr>
</tbody>
</table>

- Your boat is equipped with an anti-siphon valve, which is an integral part of fuel system.
- The valve is located at the point where the fuel feed line attaches to the fuel tank.
- The valve is spring loaded and is opened by fuel pump vacuum.
- This valve will prevent fuel from siphoning from the tank in the event of a fuel line rupture.
Quick Oil Drain System

To drain the engine oil:
1. Remove the boat from the water.
2. Unscrew the garboard drain plug.
3. Pull the draw cord until the oil drain plug and the oil drain hose slide out of the garboard drain.
4. Place the end of the oil drain hose into a suitable container.
5. Unscrew the oil drain plug and drain the engine oil.
6. Replace the oil drain plug.
7. Push the drain hose back into the bilge.
8. Replace the garboard drain plug.

Always dispose of waste oil in accordance with local regulations.
Chapter 4: Controls

Steering

- This boat features a power assisted rack-and-pinion steering system.
- Check the fluid level in the power steering reservoir every time you use your boat.
- Boat steering is not self-centering.

Shift/Throttle

⚠️ WARNING!

LOSS OF CONTROL HAZARD!

Improper maintenance of shift/throttle hardware may cause a sudden loss of control!

- Carefully read and understand all of the information about the shift/throttle in the Cruiser & Yacht Owner’s Manual.
- Also, read and understand the shifter/throttle and engine manuals included in your owner’s packet.

Power Trim and Tilt

- The stern drive on your boat is equipped with power trim and tilt.
- Trim and tilt instructions are provided in the engine operation manual and the shifter/throttle manual is included in your owner’s packet.
Trim Tabs (If Equipped)

**WARNING!**

*LOSS OF CONTROL HAZARD!*

Improper use of trim tabs will cause loss of control!

- *Do not* allow anyone unfamiliar with trim tabs to use them.
- *Do not* use trim tabs in a following sea as they will cause broaching or other unsafe handling characteristics.
- *Do not* use trim tabs to compensate for excessive unequal weight distribution.

• The trim tabs may be used to help keep your boat level at cruising speeds.
• The trim tabs are controlled by two rocker switches at the helm.
• **Before** using the trim tabs read and understand the trim tab operation manual included in your boat’s owner’s packet.

Observe the following:
• Once cruising speed is reached, the port or starboard trim switch may be used (one at a time) to level the boat.
• Perform trim tab adjustment with several short touches to the switch rather than one long one.
• After each short touch allow several seconds for the hull to react.
• The trim tab hydraulic fluid reservoir is located in the engine compartment. The fluid level must be checked periodically (at least once a year) and refilled as necessary.
Chapter 5: Navigation & Communication Equipment

Before using these systems for the first time, read and understand the instruction manuals and observe the following:

VHF Radio (If Equipped)

Your boat may include a VHF (Very High Frequency) radio at the helm. The VHF radio can be used to access weather reports, summon assistance or contact other vessels as permitted by the FCC (Federal Communications Commission). Be sure to contact the FCC for licensing, rules and regulations concerning VHF radio usage.

Compass (If Equipped)

NOTICE
Compass accuracy can be affected by many factors. Have a qualified technician calibrate your compass. Make sure the technician gives you a deviation card which shows the corrections to apply in navigational calculations. Keep a copy of the deviation card at the helm.

Your boat may come equipped with a compass. Carefully read and follow the manufacturer’s calibration and operating instructions provided in the boat’s owner’s packet.
Chapter 6: Plumbing

Bilge Pumps

NOTICE
Discharge of oil, oil waste or fuel into navigable waters is prohibited by law. Violators are subject to legal action by the local authorities.

- Your boat is equipped with two automatic impeller-type bilge pumps which are used to pump water out of the bilge.
- The bilge pumps are controlled by automatic bilge pump float switches (autofloat switches) and/or switches at the helm.
- The bilge pumps are wired directly to the battery so they will normally function even when the boat is completely shut down and left unattended.
Bilge Pump Testing

- The bilge pumps are critical to the safety of your boat.
- Check the bilge pumps often to make sure they are working.

Test each pump often as follows:
1. Turn **On** the bilge pump switch at the helm.
2. Any water in the bilge should pump overboard.

- If the pump motor is running but **not** pumping inspect the discharge hose for a kink or collapsed area.
- If no problems are found, check the bilge pump housing for clogging debris as follows:

1. Remove the power cartridge:
   a. Lift the tab while rotating the fins counter-clockwise.
   b. Lift out the power cartridge.
   c. Clear the outer housing of debris.

2. Reinstall the power cartridge:
   a. Make sure the “O” ring is properly seated.
   b. Coat the “O” ring with a light film of vegetable or mineral oil.
   c. Align the cams on either side of the power cartridge with the two slots on the outer housing
   d. Press the power cartridge into the housing while twisting clockwise.

3. Check the reinstallation by trying to twist the fins counter-clockwise without lifting the tab; the cartridge should stay in place.
**Autofloat Switches**

- The automatic bilge pumps use electromagnetic float switches (autofloat) to turn *On* the pumps whenever water rises above a preset level in the bilge.
- One autofloat switch is mounted next to each automatic bilge pump.
- The autofloat switches are wired directly to the battery and *will* normally function even when the boat is completely shut down and left unattended.

Test the autofloat switches often as follows:

1. Push the float switch test button *up* to turn *On* the bilge pump.
   - If the pump does *not* turn *On*, check the inline fuse.
   - If the fuse is good but the switch still doesn’t work, it may mean the switch is bad or possibly the battery is low.

2. Push test button all the way *down* to return the float switch to auto mode.

![FLOAT SWITCH TESTING](image1)

![LIFT SWITCH UP](image2)

![PUSH SWITCH DOWN](image3)

**CAUTION!**

When the test is completed on each float switch, you *MUST* push the test button *all the way down* to the auto position to return the switch to auto mode!
Seawater Systems

Seacocks

A seacock is a valve, controlled by a 90° lever, used to manage the intake of seawater through the hull and below the water line. Seacocks are typically used on your boat in the following seawater intake systems:

- Marine head (toilet)
- Air conditioning system (if equipped)

Before using any of these systems, make sure that the system’s seacock is Open and remains Open until the system is shut Off.

Seawater Strainers

- Seawater strainers are used in water pickup systems to filter incoming seawater.
- A seawater strainer is located near each system’s seacock.
- Check the strainers for leaks and/or debris every time you use your boat.
- If debris is found, clean the seawater strainer as follows:

1. Turn Off the component or system (marine head, air conditioning system, etc.) that the strainer is connected to.
2. Close the seacock that sends seawater to the strainer you are about to clean. The seacock must remain Closed until the strainer is completely reassembled.
3. Take apart the seawater strainer.
4. Remove the debris.
5. Flush the strainer with water.
6. Reassemble the seawater strainer.
7. Open the seacock and check for leaks around the strainer.
8. If no leaks are found, you may use the component or system.
Freshwater System

**WARNING!**
- Only use safe drinking (potable) water in your boat's freshwater system.
- Only use a sanitary drinking water hose to fill the water tank or connect to city water.
- Never use a common garden hose for drinking water.

- Read the Freshwater System section in the Cruiser & Yacht Owner’s Manual.
- Your boat is equipped with a pressure type (demand) freshwater (potable) system.
- This system can be pressurized by turning **On** the water pump.
- See the Component Location section of this Supplement for the location of the water pump switch.
- Since the water pump requires DC power, the battery switch **must** be in the "1", "2" or "BOTH" position for the pump to work.
Observe the following about the freshwater system:

- Turn Off the water pump when the boat is not in use or the water tank is empty.
- Inspect and clean the water filter often (located on the water pump).
- When your boat is to be left unattended for long periods of time, pump the water tank dry to prevent stored water from becoming stagnant and distasteful.
- If the freshwater system needs to be disinfected, ask your dealer about treatments available for your boat’s system.

**Freshwater System Winterization**

1. Turn On the water system switch.
2. Open all of the faucets and showers and let the water system drain completely.
3. Turn Off the water system switch.

Any remaining water must be removed from the water lines. There are two ways to remove the remaining water from the lines:

- Compressed Air
- Gravity Draining

**Compressed Air**

You must have an air compressor with an air hose and an air nozzle.

1. Remove the water line from the outlet side of the water pump (opposite side from filter).
2. Open the faucet that is furthest away from the water pump.
3. Place the air nozzle against the end of the just removed water line and blow air through the system.
4. When water stops coming out of the Open faucet, stop the air and Close the faucet.
5. One at a time, repeat this process on all faucets and showers.

**Gravity Draining**

1. Open all faucets and showers.
2. Remove the drain plug from the tee fitting on the freshwater tank.
3. When the water has stopped draining from the freshwater tank, replace the drain plug.

**Transom Shower (If Equipped)**

- The water pump switch must be turned On before using the transom shower.
- Be sure to read the manufacturer’s instructions, provided in your owner’s packet.
Water Heater

**WARNING!**

**HOT HAZARD!**
Water heated by the water heater can reach temperatures hot enough to scald the skin.

**CAUTION!**

**WATER HEATER DAMAGE HAZARD!**
- **DO NOT** turn on the water heater electrical circuit on the AC panel until the water heater tank is COMPLETELY filled with water.
- Even momentary operation in a dry tank will damage the heating elements.
- Warranty replacements **WILL NOT** be made on elements damaged in this manner.
- The tank is full if water flows from the tap when the hot water is turned On in the galley.
- The water heater should be drained and the power turned OFF when the possibility of freezing exists.

**NOTICE**

If your boat is connected to shore power but the water heater is not working:
- Make sure the water heater circuit breaker on the AC panel is switched On.

If the circuit breaker on the AC panel is On, but the water heater is still not working:
- Consult with your dealer about checking the "push to reset" circuit breaker located on the water heater.

- The water heater is connected to the AC power system, therefore, you must make sure that the water heater breaker on the AC panel is turned On before water will be heated.
- Read the manufacturer’s instruction manual supplied in your boat’s owner’s packet and observe the warnings above.

**Winterizing the Water Heater**

1. Turn **Off** the water heater breaker.
2. Disconnect the hose (A) attached to the pressure relief valve (B).
3. If there is any water in this hose, drain it into the bilge or into a bucket.
4. **Open** the pressure relief valve (B).
5. **Open** the drain valve (C).
- Leave the pressure relief and drain valves Open until you fit out the boat after storage.
Drain Systems

Sink Drains
Gray water (water from the sinks) is gravity drained overboard.

Deck Drains

Water on the deck is drained overboard through the deck drains. Keep the deck drains free of debris.
Portable Toilet (If Equipped)
Read the manufacturer’s operating instructions supplied in your owner’s packet before using the portable toilet.

Marine Head with Holding Tank (If Equipped)

- Read the marine head operation and maintenance manual (included in your boat’s owner’s packet).
- The holding tank is plumbed to a waste fitting on the deck for dockside pump-out.
- Check the content level of the holding tank by looking at the side of the tank.
- Empty the holding tank often.

Using the marine head:
1. **Open** the head’s seawater intake valve (seacock).
2. **Before** using the head, pump enough water into the bowl to wet the sides.
3. After use, pump until the bowl is thoroughly cleaned. Continue pumping a few more times to clean the lines.
4. If excess waste causes the water to rise in the bowl, stop pumping until the water recedes.

Winterizing The Marine Head
1. Shut **Off** the intake seacock, and pump the head until the bowl is dry.
2. Remove the drain plug in the base and pump again to remove all of the water.
- **Do not** fill the bowl with anti-freeze.
- **Close** the intake seacock while the boat is underway or whenever the boat is left moored in the water.
Macerator (If Equipped)

NOTICE
Check with local authorities for regulations regarding the legal use of marine head systems.

To use the macerator to pump waste directly into the water (where regulations permit):

1. **Open** the underwater discharge seacock.
2. Press both macerator switches at the same time to run the pump. **Do not** continue running the macerator if the waste holding tank is empty.
3. **Close** the underwater discharge seacock when you are done pumping.
Chapter 7: Deck Equipment

Cleats and Tow Eyes

⚠️ WARNING!

PERSONAL INJURY and/or PRODUCT or PROPERTY DAMAGE HAZARD!

- NEVER lift the boat using the bow and stern eyes or the cleats.

Carefully read the section on towing in the Cruiser & Yacht Owner’s Manual before:

- Towing anything behind the boat.
- Being towed by another vessel.
Chapter 8: Appliances & Entertainment Systems

NOTICE
Always keep an approved ABC-type fire extinguisher in galley area.

All appliances installed on your boat come with their own manuals. These manuals contain detailed instructions and important safeguards. Thoroughly read and understand these manuals before using your boat’s appliances.

- Make sure the AC breaker is turned On for the appliance you wish to use.

Refrigerator (If Equipped)
Your boat features a dual voltage, 120-volt AC/12-volt DC, refrigerator. The refrigerator runs on 12-volt DC power unless 120-volt AC power is being supplied by shore power and the AC refrigerator breaker is On.

Microwave Oven (If Equipped)
Before attempting to use the microwave oven, make sure the breaker switch on the AC master panel is On.

Electric Stove (If Equipped)

WARNING!

BURN/SCALDING and/or FIRE HAZARD!

- Read the stove’s instruction manual before using.
- Always keep an approved ABC-type fire extinguisher in galley area.
- Do not use the stove while underway.
- Any non-cooking devices on or near your stove during use are potential fire hazards!
- DO NOT touch burners, grates or nearby surfaces as they may be hot even when they are dark in color. Areas near burners and grates may become hot enough to cause burns.
- During and after use, do not touch or let clothing or other flammable material come in contact with heated units or areas near the units (burner tops, main frame sides and back, sea rails and pot holders) until they have had sufficient time to cool.
**Alcohol/Electric Stove (If Equipped)**

### DANGER!

**CARBON MONOXIDE POISONING HAZARD!**
- The alcohol stove is a source of dangerous carbon monoxide gas (CO).
- *Before* using the alcohol stove, open doors and windows to make sure there is enough fresh air for ventilation.

### WARNING!

- Open flame cooking appliances consume oxygen, this can cause asphyxiation or death.
- Maintain open ventilation.

### WARNING!

**BURN/SCALDING and/or FIRE HAZARD!**
- Read the stove’s instruction manual before using.
- *Always* keep an approved ABC-type fire extinguisher in galley area.
- Do not use the stove while underway.
- Any non-cooking devices on or near your stove during use are potential fire hazards!
- *DO NOT* touch burners, grates or nearby surfaces as they may be hot even when they are dark in color. Areas near burners and grates may become hot enough to cause burns.
- During and after use, do not touch or let clothing or other flammable material come in contact with heated units or areas near the units (burner tops, main frame sides and back, sea rails and pot holders) until they have had sufficient time to cool.

### CAUTION!

**PRODUCT DAMAGE HAZARD!**

To prevent overheating which can destroy the electric burner elements, *NEVER* attempt to use both alcohol and electric burners simultaneously.

---

**Audio & Visual Equipment**

### NOTICE

AM radio reception may be impaired anytime the engine is running.
The dinette table can be removed and the dinette area can be converted into a berth.

1. Lift the table (A) and remove the table leg (B).
2. Place the table so that it fits securely on the support brackets (C) at the front of the dinette seats.
3. Place the filler cushion (D) on top of the table.
Chapter 10: Lights

Care and Maintenance

All of the lights installed on your boat are of top quality, but you should be aware that failure may periodically occur for a variety of reasons:

1. There may be a blown fuse - replace the fuse.
2. The bulb may be burned out - carry spare bulbs for replacement.
3. A wire may be damaged or may have come loose - repair as required.
4. The bulb base may be corroded - clean the base and coat it with non-conductive electrical lubricant.

Navigation Lights

Avoid the storage of gear where it would block navigation lights from view.

Read and understand the navigation light section of Cruiser & Yacht Owner’s Manual.

Interior & Exterior Lights

Avoid the storage of gear where it would block navigation lights from view.

Be conservative in the use of battery power.

Prolonged use of cabin interior lights (overnight) will result in a drained battery.

- The lights are powered by the boat’s 12-volt DC system.
- The battery switch must be in the 1, 2 or BOTH position for the lights to work.
- There are On/Off light switches for different sets of lights on the cabin wall.
- Some individual lights also have a switch on the light.
Chapter 11: Air Conditioning (If Equipped)

Air Conditioning System (If Equipped)

DANGER!

CARBON MONOXIDE POISONING HAZARD!

Dangerous carbon monoxide gas (CO) can be brought into the boat through the air conditioning system.

CAUTION!

SYSTEM DAMAGE HAZARD!

The air conditioning system’s seacock must be OPENED before turning on the air conditioner and must remain OPEN during use.

Read the air conditioner manual, included in your owner’s packet, before using the air conditioning system.

- **Before** using the air conditioning system, make sure the breakers on the AC main distribution panel are turned **On** and make sure the system’s seawater pickup seacock is **Open**. The seacock **must** remain **Open** anytime the air conditioner is in use.
- Check the seawater pickup strainer for debris according to the directions given in the Seawater Strainer section of this **Supplement**.
Chapter 12: Electrical System

**DANGER!**

**EXTREME FIRE, SHOCK & EXPLOSION HAZARD!**

- To minimize the risks of fire and explosion, *NEVER* install knife switches or other arcing devices in the fuel compartments.
- *NEVER* substitute automotive parts for marine parts. Electrical, ignition and fuel system parts were designed and manufactured to comply with rules and regulations that minimize risks of fire and explosion.
- *DO NOT* modify the electrical systems or relevant drawings.
- Have qualified personnel install batteries and/or perform electrical system maintenance.
- Turn *OFF* the battery switch *BEFORE* doing any work in the engine spaces.

**WARNING!**

**FIRE & EXPLOSION HAZARD!**

- Fuel fumes are heavier than air and *will* collect in the bilge areas where they can be accidently ignited.
- Visually and by smell (sniff test), check the engine and fuel compartments for fumes or accumulation of fuel.
- *ALWAYS* run the bilge blowers for at least four minutes *before* turning on electrical devices, starting the engine, or electrical system maintenance.
- Minimize the danger of fire and explosion by not exposing the batteries to open flame or sparks. *NEVER* smoke anywhere near the batteries.

**CAUTION!**

**SHOCK & ELECTRICAL SYSTEM DAMAGE HAZARD!**

*NEVER* disconnect the battery cables while the engine is running since it can cause damage to your boat’s electrical system components.

**NOTICE**

Electrical connections are prone to corrosion. To reduce corrosion caused electrical problems, keep all electrical connections clean and apply a spray-on protectant that is designed to protect connections from corrosion.
12-Volt DC System

Batteries
The batteries supply electricity for lights, accessories, and engine starting.
The Electrical section of Chapter 8, in the Cruiser & Yacht Owner’s Manual, provides battery care and maintenance instructions.

Fuses and Circuit Breakers
- Fuses and circuit breakers for engines and main accessory power are on the DC main distribution panel and on the battery switch panel.
- Some equipment may have secondary fuse protection at the unit, behind the battery switch panel or at the batteries.
- Electronics power is provided at the helm station.

Battery Switch
- The battery switch has four (4) positions.
- Some “Standby Loads”, such as the CO monitor, the automatic bilge pumps, and the stereo memory, are not affected by the battery switch since they are wired directly to the battery (see the Wiring Diagrams in this Supplement for more details).

Battery Switch Positions

<table>
<thead>
<tr>

<td>Battery 2 Provides Starting Power</td>
<td>Battery 2 Provides Power for Accessories and Lights</td>
<td>Charges Battery 2</td>
<td>Charges BOTH Batteries</td>
</tr>
<tr>
<td>POSITION BOTH</td>
<td>BOTH Batteries Provide Starting Power</td>
<td>BOTH Batteries Provide Power for Accessories and Lights (not advised unless engine is running)</td>
<td>Charges BOTH Batteries</td>
<td>Batteries will NOT Charge Properly</td>
</tr>
</tbody>
</table>

NOTICE
Since the batteries on your boat were dealer-installed, the battery switch positions listed below may vary. Make sure you get a full explanation of battery switch use from your selling dealer.
**Alternator**

The engine alternator will keep the batteries properly charged when running at cruising speeds.

**Battery Charger (If Equipped)**

*CAUTION!*

**ENGINE & ELECTRICAL SYSTEM DAMAGE HAZARD!**

*NEVER* run the boat’s engine and the battery charger at the same time.

*CAUTION!*

The battery charging systems (alternator and battery charger) installed on your boat are designed to charge conventional lead-acid batteries. Before installing gel-cell or other new technology batteries, consult with the battery manufacturer about charging system requirements.

Thoroughly read and understand the battery charger manual (provided in your owner’s packet) *before* using the battery charger for the first time.

- The battery charger will charge the boat’s batteries whenever the boat is plugged into 120V/60Hz shore power and the “BATTERY CHARGER” AC breaker is *On*.
- The battery switch can be in any position during charging.
- You may use DC powered electrical systems, such as the lights and stereo when the battery charger is *On*, but there will be a corresponding drop in charger performance.

**12-Volt Accessory Outlet**

*CAUTION!*

*DO NOT* use the 12-volt accessory outlet with a cigarette or cigar lighter. High temperatures may melt the outlet.

- Your boat is equipped with a 12-volt accessory outlet at the helm.
- The outlet can be used with any 12-volt device which draws 15 amps or less.
- The 12-volt accessory outlet is protected by a 15 amp circuit breaker on the main circuit breaker panel.
120-Volt AC System (If Equipped)

**CAUTION!**

**WATER HEATER DAMAGE HAZARD!**

- **DO NOT** turn on the water heater AC panel electrical circuit until the water heater tank is COMPLETELY filled with water.
- The tank is full if water flows from the tap when the hot water is turned *On* in the galley.
- Even momentary operation in a dry tank will damage the heating elements.
- Warranty replacements *WILL NOT* be made on elements damaged in this manner.

---

**NOTICE**

When using shore power the simultaneous use of several AC components can result in an overloaded circuit. It may be necessary to turn *Off* one or more accessories in order to use another accessory.

- The 120V/60Hz AC system can be energized by shore power.
- The master circuit breakers, located on the AC panel, provide power source selections to AC powered accessories. Individual breakers *must* be turned *On* to supply power to the accessories you wish to use.
- The AC panel may contain inactive circuit breakers for accessories that are *not* available for this model boat.
Shore Power

**DANGER!**

**FIRE, EXPLOSION & SHOCK HAZARD!**
- *DO NOT* alter shore power connectors and use only compatible connectors.
- Before plugging in or unplugging the shore power cord to your boat, make sure *all* breakers and switches on the AC master panel are turned *OFF*.
- To prevent shock or injury from an accidental dropping of the “hot” cord into the water, *ALWAYS* plug the shore power cord to the boat inlet first; then to the dockside outlet. When unplugging from shore power, unplug the shore power cord from the dockside outlet first.
- *NEVER* leave a shore power cord plugged in to the dockside outlet only.
- Only use shore power cords approved for marine use. *NEVER* use ordinary indoor or outdoor extension cords that are *not* rated for marine use.

**WARNING!**

**SHOCK & ELECTRICAL SYSTEM DAMAGE HAZARD!**
- Monitor the polarity indicator lights EVERY TIME you connect to shore power.
- If a red reversed polarity light turns *On* when you are connecting to shore power, *DO NOT* turn on the main breaker switches.
- Instead, IMMEDIATELY unplug the shore power cord (*ALWAYS* from the dockside outlet first) and alert marina management.

**WARNING!**

**SHOCK & ELECTRICAL SYSTEM DAMAGE HAZARD!**
- Periodically check the shore power cord(s) for deterioration or damage.
- *NEVER* use damaged or faulty cords since the danger of fire and electrical shock exists.
- *DO NOT* pinch shore power cords in doors or hatches, or coil the shore power cord too tightly since these situations can generate enough heat to result in a fire.
- If a shore power cord accidentally becomes immersed in water, THOROUGHLY dry the blades and contact slots before reusing.
The single shore power 120V/60Hz, AC system (if equipped) features one, 120V/30 amp, shore power receptacle.

- If your boat is equipped with an air conditioning system, a second (dual) 30 amp inlet has been installed.

The dual shore power inlets are labeled "LINE 1" and "LINE 2", which corresponds to the "LINE 1" and "LINE 2" master breakers on the AC panel.

The dual shore power system is designed so that each line is independent of the other except when the AC power transfer switch is used.
Connecting To Shore Power

NOTES:
DUEL INLETS ONLY IF EQUIPPED WITH AIR CONDITIONER

15 AMPS
BATTERY CHARGER
1. Review all hazard information at the beginning of this section, *Shore Power*.
2. Turn *Off all* breakers and switches on the AC master panel.
3. Attach the shore power cord to the boat inlet first then to the dockside outlet.
4. Monitor the AC panel’s polarity indicator lights, located below the line master breaker(s), as follows:
   • A *green* light illuminating after the power cord is plugged into the dockside outlet indicates acceptable electrical power. You may turn *On* the master breaker switch.
   • A *red* light, however, indicates reversed polarity, which could cause electrical system damage and possibly electrical shock injuries. In this case, *do not* turn *On* the master breaker switch.
5. Switch the "LINE 1 DOCKSIDE MASTER" *On*.
6. If equipped with dual dockside, switch the "LINE 2 DOCKSIDE MASTER" *On*.
7. Turn *On* the individual component breakers as required.

**Transfer Switch (If Equipped with Dual Shore Power)**

<table>
<thead>
<tr>
<th>NOTICE</th>
</tr>
</thead>
<tbody>
<tr>
<td>• When using the &quot;Transfer Switch&quot; <em>do not</em> exceed 30 total amps.</td>
</tr>
<tr>
<td>• The amperage of each component breaker is shown in figure 1.</td>
</tr>
<tr>
<td>• The voltage on each line can be read by setting the voltmeter selector switch.</td>
</tr>
</tbody>
</table>

When only one dockside outlet is available, you can use the "Transfer Switch" to provide power to both lines.

1. Connect to shore power as described in steps 1 through 4 above.
2. Switch the "LINE 1 TRANSFER SWITCH" (transfers power from line 1 to line 2) *On* instead of the "LINE 2 DOCKSIDE MASTER".
3. Turn *On* the individual component breakers as required.
