Owner's Manual Supplement
4087 Aft Cabin Motoryacht

Bayliner
Port Engine Serial Number:

Stbd. Engine Serial Number:

Hull Identification Number:

Hull Identification Number
The Hull Identification Number (HIN) is located on the starboard side of the transom. Be sure to record the HIN (and the engine serial numbers) in the space provided above. Please refer to the HIN for any correspondence or orders.

General Notes
The material in this document is for information only and is subject to change without notice. While reasonable efforts have been made in the preparation of this document to assure its accuracy, Bayliner assumes no liability resulting from errors or omissions in this document, or from the use of information contained herein.

Due to our commitment to product improvement, Bayliner reserves the right to make changes in the product design, specifications, and equipment at any time without notice or obligation. Illustrations and/or photos may show optional equipment.

All Bayliner products meet or exceed USCG (United States Coast Guard) and/or NMMA (National Marine Manufacturer’s Association) construction standards. Manufactured with 1,1,1 Trichloroethane, a substance which harms public health and environment during the manufacturing process by destroying ozone in the upper atmosphere.

Proprietary Rights
This document discloses subject matter in which Bayliner has proprietary rights. The information and design disclosed herein were originated by and are the property of Bayliner. Neither receipt nor possession thereof confers or transfers any right to reproduce, copy, alter or disclose the document or any part thereof, any information contained therein, or to construct boats or any item from it, except by written permission from or written agreement with Bayliner. This document is to be returned upon request to Bayliner.
Congratulations and welcome aboard your new Bayliner Motoryacht!

Thank you for choosing our product. Bayliner is committed to the goal of building the highest quality products in the marine industry and to providing the finest after-the-sale support in the world.

To keep our respected status as the number one boat builder in the world, Bayliner has instituted an ongoing **Total Customer Satisfaction Program**.

The guiding principles of this program are:

✓ Design, build and support the finest marine products in the world, in every market we serve.

✓ Be personally and individually responsible for the customer’s total satisfaction.

✓ Remember that every customer has a choice, and we want them to choose Bayliner!

Welcome to the Bayliner family. We are looking forward to serving your boating needs, now and in the future!

CHAPTER 1: ABOUT THIS MANUAL

This Owner’s Manual Supplement was prepared to provide specific information about your yacht. Please study this supplement and the Owner’s Manual carefully, paying particular attention to the LIMITED WARRANTY section. Keep this supplement in a secure place and hand it over to the new owner when you sell the boat.

Dealer Service

Make certain that you receive a full explanation of all systems from the selling dealer before taking delivery of your yacht. Your selling dealer is your key to service. If you experience any problems with your new yacht, immediately contact the selling dealer. If for any reason your selling dealer is unable to help, you can call us direct on our customer service hotline: 360-435-8957 or send us a FAX: 360-403-4235

Boating Experience

If this is your first boat or if you are changing to a type of boat you are not familiar with, for your own comfort and safety, please ensure that you obtain handling and operating experience before assuming command of the yacht.

We strongly recommend that you take one of the boating safety classes offered by the U.S. Power Squadrons (http://www.usps.org/) or the U.S. Coast Guard Auxiliary (http://207.201.180.170/). For more course information, including dates and locations of upcoming classes, visit their web sites or call their local offices.

Outside the U.S., your selling dealer, national sailing federation or local yacht club can advise you of local sea schools or competent instructors.

![WARNING]

CONTROL HAZARD - A qualified operator must be in control of the yacht at all times. DO NOT operate your yacht while under the influence of alcohol or drugs.

Engine/Accessories Guidelines

Your yacht’s engines and accessories were selected to provide optimum performance and service. Installing different engines or other accessories may cause unwanted handling characteristics. Should you choose to install different engines or to add accessories that will affect the boat’s running trim, have an experienced marine technician perform a safety inspection and a handling test before operating your yacht by yourself again.

Structural Limitations

The command bridge, transom platform and bow platform are designed to be lightweight for proper boat balance. The load limit for these platforms and the command bridge is 30 pounds per square foot, evenly distributed.

Safety Standards

Your yacht’s mechanical and electrical systems were designed to meet safety standards in effect at the time it was built. Some of these standards were mandated by law. All of them were designed to insure your safety, and the safety of other people, vessels and property.

Please read the Owner’s Manual for important safety standards and hazard information.

![DANGER]

PERSONAL SAFETY HAZARD - DO NOT allow anyone to ride on parts of the yacht not designated for such use. Sitting on seat backs, lounging on the forward deck, bow riding, gunwale riding or occupying transom platform while underway is especially hazardous and will cause personal injury or death.
Qualified Maintenance

⚠️ WARNING
To maintain the integrity and safety of your yacht, only qualified personnel should perform maintenance on, or in any way modify: The steering system, propulsion system, engine control system, fuel system, environmental control system, or electrical system.

Failure to maintain these systems (listed in the warning above) as designed could violate the laws in your jurisdiction and could expose you and other people to the danger of bodily injury or accidental death. We recommend that you follow the instructions provided in this supplement, the Owner’s Manual, the engine owner’s manual and the accessory instruction sheets included with your boat.

Hazard Warning Symbols
The hazard warning symbols shown below are used throughout this supplement to call attention to potentially dangerous situations which could lead to either personal injury or product damage. We urge you to read these warnings carefully and follow all safety recommendations.

⚠️ DANGER
This symbol alerts you to immediate hazards which WILL cause severe personal injury or death if the warning is ignored.

⚠️ WARNING
This symbol alerts you to hazards or unsafe practices which COULD result in severe personal injury or death if the warning is ignored.

⚠️ CAUTION
This symbol alerts you to hazards or unsafe practices which COULD result in minor personal injury or cause product or property damage if the warning is ignored.

NOTICE
This symbol calls attention to installation, operation or maintenance information, which is important to proper operation but is not hazard-related.

- Fire and/or Explosion Hazard!
- Open Flame Hazard
- Rotating Propeller Hazard
- Personal Injury/Falling Hazard

Lifting Sling Positions

4087 Motoryacht • Owner's Manual Supplement
Deck Exterior Hardware Locations

**Spotlight (Option)**
The spotlight has a separate brochure explaining its features. The spotlight (located on the bow platform) can be controlled from the upper helm station.

**Anchor Windlass (Option)**
Please read the manufacturer’s instructions supplied in your yacht’s owner’s packet. To haul the anchor, use engine power (not the windlass) to move the boat to, and directly above, the anchor. Activate the windlass and disengage the anchor from the bottom by pulling it straight up. DO NOT pull the boat to the anchor using the windlass or continue to operate the windlass if it has stalled or is overloaded. The windlass power switch is located next to the AC panel. The windlass control switches are located on the fore deck near the windlass.

Communication/Navigation/Controls

**VHF Radio (Option)**
Your yacht may be equipped with an optional VHF radio. The VHF radio has a separate manual, in your yacht’s owner’s packet, that explains its operating features. We strongly recommend that you read the operating instructions before using the VHF radio.

**Depth Finder (Option)**
Your yacht may come equipped with a digital depth finder. It will provide you with measurements of water depth beneath the boat. Read the manufacturer’s operating instructions included in your owner’s packet before using the unit.

⚠️ **WARNING**
DO NOT use the depth finder as a navigational aid to prevent collision, grounding, boat damage or personal injury. When the boat is moving, submerged objects will not be seen until they are already under the boat. Bottom depths may change too quickly to allow time for the boat operator to react. If you suspect shallow water or submerged objects, operate the boat at very slow speeds.
Compass
Manufacturer’s calibration and operating instructions are provided in your owner’s packet. We strongly recommend having a qualified technician calibrate your compass. Make sure the technician gives you a deviation card which shows the corrections to apply in navigational calculations. Keep a copy of the deviation card at each helm.

Trim Tabs
Trim tabs control the longitudinal and lateral trim of your boat at cruising speeds. Two rocker switches identified by the words “BOW DOWN” are located at the each helm station.

Once the best bow cruising trim is reached, use the port or starboard trim switches, one at a time, to correct for unequal lateral loading. DO NOT use trim tabs to compensate for excessive unequal weight distribution.

Trim tab adjustment should be performed by several short touches to the switch rather than one long one. After each short touch allow about five seconds for the hull to react.

The trim tab fluid reservoir is located on the transom in the aft bilge. The fluid level should be checked periodically (at least once a year) and refilled as necessary.

⚠️ WARNING ⚠️
Improper use of trim tabs may cause loss of control. DO NOT use trim tabs in a following sea as they may cause broaching or other unsafe handling characteristics. DO NOT let anyone unfamiliar with trim tabs to operate them.

Steering System
Your yacht’s steering system is manual hydraulic, not power steering. At no time should you expect this system to turn as easily as a car’s power steering.

A rhythmic pulsing when turning the wheel is a characteristic of the pump and is not a malfunction. Also, when coming off a hard-over position, resistances may be felt, followed by a distinct sound. This is a normal situation resulting from the release of the check valve.

The fluid reservoir for the hydraulic steering system can be accessed through the carpeted settee shelf on the aft bulkhead in the aft berth (see photo below). Follow the instructions in your yacht’s owner’s packet and on the reservoir. Check the fluid level and pressure often.

Rudder Stuffing Gland
The rudder stuffing gland is part of the assembly where the rudders emerge from the bottom of the boat.

It is similar to the propeller shaft stuffing box and will require the same maintenance. Since it does not receive the same wear as the propeller shaft, repacking is seldom required. This shaft stuffing gland should not leak any water.
Engines and Generator Systems

The owner’s packet contains detailed engine operation and maintenance manuals. Read and understand these manuals before operating or performing maintenance to the engines.

Cooling Systems

The water pickup systems provide raw water to the engine and generator cooling systems. The seawater strainers should be checked regularly for debris. The standard configuration is one strainer for each engine and one for the generator. The strainers are located in the engine room.

Exhaust Systems

The exhaust system is designed to keep water out of the engines in most sea conditions. However, care should be taken NOT to anchor the stern to sea, and the engines should NOT be shut off if the seas are too high.

Always use good seamanship and consider the sea conditions before anchoring or shutting off the engines.

Check all of the exhaust system clamps after the first 20 hours. Continue to check the clamps periodically after that.
**Engine Room Ventilation System**

The blowers remove fumes from the engine and generator spaces and draw fresh air into the spaces through the vents. To ensure fresh air circulation, operate the blowers for at least four minutes before starting the engines or generator, during starting, and while operating the yacht below cruising speed.

---

**WARNING**

Operation of the blower system is *NOT A GUARANTEE* that explosive fumes have been removed. If you smell fuel, *DO NOT* start the engine. If the engine is already running, immediately shut off the engine and all electrical devices. Investigate immediately. *DO NOT* obstruct or modify the ventilation system.
Shaft-Transmission Alignment

- Alignment between the engine transmission output shaft and the propeller shaft is critical. This alignment has been performed at the factory, and was rechecked by the dealer after the boat had been in the water for 48 hours.
- An alignment inspection should be performed as part of the routine maintenance program (after the initial 30 hours of operation, then every 60 hours) and whenever unusual noise or vibration is noticed.
- To insure proper alignment after a haulout or dry storage, wait 48 hours after launching before making final alignment adjustments.

Checking Alignment

Engine alignment requires moving the engine and should be performed by a marine mechanic. However, checking the alignment is relatively simple when these steps are followed:

1. Remove the flange bolts at the transmission-to-prop shaft coupling and slide the shaft aft until the flanges are about 1/4" apart.
2. Rotate the shaft to see if there is obvious “wobble” of the shaft flange. If there is, it may indicate shaft damage and should be inspected by a marine mechanic as soon as possible.
3. Move the shaft up and down and from side to side to determine, as closely as possible, the central position where the shaft is normally located. At this position, the transmission flange should align with the shaft flange without moving the shaft more than 1/8". If this is not the case, a misalignment condition exists (see CAUTION on right).
4. Move the shaft flange into contact with the transmission flange.
5. Check the gap between flange faces by trying to insert a 0.003" feeler gauge at the top, bottom and each side.
6. Repeat this operation after rotating the shaft flange 1/4 turn (3 times). If the feeler gauge can be easily inserted at any point, a misalignment condition exists (see CAUTION on right).
7. Reinstall the flange bolts, nuts and lock washers (if provided) and torque to the specifications listed to the right. Replacement bolts, nuts and washers must be corrosion resistant and grade 8 or better.

Shaft Log Stuffing Box Packing

The propeller shaft emerges from the bottom of the yacht through an opening called the shaft log. The shaft stuffing box is connected to the shaft log by a short length of special flexible hose. Packing rings are compressed around the shaft by the packing gland. The stuffing for the box prevents excessive amounts of water from leaking around the shaft and into the boat. Normal wear can cause stuffing box leakage to increase. Excessive leakage can usually be stopped by tightening the packing gland nuts slightly. DO NOT over tighten the packing gland nuts. A slight leak (up to 10 drops per minute while running) is normal and helps lubricate the packing and is therefore NECESSARY.

When stuffing box leakage becomes excessive, even after following the above steps, packing replacement can be performed as follows:

1. Remove the yacht from water.
2. Loosen the packing gland nuts and back the packing gland from the sleeve. Remove the old packing.
3. Wrap new packing around the shaft (4 rings, 3/16" for 1 1/2" shafts), then cut the rings with a razor blade at an angle approximately 30 degrees to the long axis of the shaft. Stagger the ends of each ring around the shaft and insure that the ring are at the bottom in the sleeve.
4. Tighten the packing gland nuts until resistance is felt.

When initially launched, the packing must be allowed to leak at a rate of 5 to 30 drops per minute, as it will expand and seal from water contact and friction heat from the turning shaft. Failure to allow this leak-off will result in packing burnout after a short period of time.
Fuel Systems

**WARNING**

FIRE/EXPLOSION HAZARD - It is very important that the fuel system be inspected thoroughly the first time it is filled and at each subsequent filling. The Fueling Instructions in the Owner’s Manual and the Fuel Recommendations in the Engine Manual must be followed.

**CAUTION**

Air in the diesel supply system can stop an engine or severely restrict performance. If you suspect air in your diesel fuel lines, refer to your Engine Manual for detailed instructions on how to “bleed” the system.

**CAUTION**

Avoid the storage or handling of gear near the fuel lines, fittings and tank.

**Fuel Quality**

Make sure your fuel suppliers are reputable and can be relied upon to furnish clean, high quality fuel. Once you have found such suppliers, keep your tank as full as possible with their fuel, allowing for expansion due to temperature variations. Then, if you are forced to add to the tank with a potentially poor quality supply, the portion of poor quality fuel will be minimized.

Carefully read the Fuel Section of the Engine Operation Manual included in your yacht’s owner’s packet. Give special attention to the subject of Fuel Recommendations. Filters/sepators should be inspected periodically for debris and replaced as needed according to the instructions detailed in your engine manual, generator manual and in the filter literature supplied in your yacht’s owner’s packet.

**Fuel Management Board**

Your yacht may or may not be equipped with a fuel management board.

- On models equipped with a fuel management board (located on the forward bulkhead in the engine room) fuel can be directed from either tank to the engines and generator using the supply valves.
- On models that are not equipped with a fuel management board, the port fuel tank provides fuel for the port engine while the starboard fuel tank provides fuel for the starboard engine and the generator.

**Fuel Transfer Pump (Diesel Only)**

Yachts without a fuel management board will be equipped with a fuel transfer pump. The fuel transfer pump is used to transfer fuel from a full tank to a nearly empty tank. The pump is activated by the using the fuel transfer switch, located at the upper helm station.

**CAUTION**

Environmental Hazard! NEVER transfer fuel into a full (or nearly full) fuel tank. Fuel transferred into a full tank may spill overboard through the tank venting system.

**Anti-siphon Valve (Gas Engines Only)**

An anti-siphon valve is an integral part of the fuel line barb fitting on each fuel tank. These valves are spring loaded and are opened by fuel pump vacuum. If a fuel line ruptures the valve prevents the siphoning of fuel from the tank.
Fuel Fills and Vents
Fuel fills are located either on the aft deck or on the side decks adjacent to the aft cockpit. Fuel receptacle caps are marked “Diesel” or “GAS”. Fuel vents are normally located in the hull or transom below and in the same general area as the fill. If you experience difficulty filling the fuel tank, check to see that the fuel fill and vent lines are free of obstructions and kinks.

4087 Motoryacht • Owner's Manual Supplement
Bilge Pump Systems

Your yacht is equipped with six impeller-type bilge pumps which are controlled by automatic bilge pump switches (autofloat switches) and/or switches on the dash panel.

The autofloat switches activate whenever water accumulates above a preset level in the bilge. They are wired directly to the battery and will normally function even when the yacht is completely shut down and unattended, such as when the yacht is moored at a marina.

Bilge Pump Maintenance

Bilge pumps should be checked often to verify that they are working properly. Check each bilge pump by activating its dash-mounted switch. Verify that water in the bilge is pumped overboard. If bilge water is present and the pump motor is running but not pumping, inspect the discharge hose for a kink or collapsed area. If no problems are found, check the bilge pump housing for clogging debris as follows:

To remove the power cartridge:
1. Lift the tab while rotating the fins counter-clockwise and lift out the power cartridge (Fig. 1).
2. Clear the housing of debris.

To reinstall the power cartridge:
1. Make sure the “O” ring is properly seated and coat the “O” ring with a light film of vegetable oil or mineral oil (Fig. 2).
2. Align the two cams on either side of the power cartridge with the two slots on the outer housing. Press the power cartridge into the housing and twist clockwise. Ensure proper reinstallation by attempting to twist the fins counter-clockwise without lifting the tab. The cartridge should stay in place.
**Autofloat Switch Maintenance**

If applicable, the autofloat switch should also be checked often for proper operation. Lift the float by turning the plastic insert where the wires enter the housing, 1/4 turn counter-clockwise (Fig. 3).

As the float is lifted, the bilge pump should turn on. If lifting the float does not turn the pump on, check the inline fuse. If the fuse is good but the switch does not work, it may indicate a bad switch or possibly a low battery.

---

**NOTICE**

Discharge of oil, oil waste or fuel into navigable waters is prohibited by law. Violators are subject to legal action by the local authorities.

---

**Fresh Water System**

The water pump and water filter can be accessed through the panel under the aft berth mattress (see photo on right). The water filter should be inspected and cleaned often.

The water fill is located on the starboard side of the aft deck and the water tank is located under the bed in the aft berth. The water tank is equipped with a water level indicator in the AC/DC cabinet on the starboard side of the salon. It is always a good idea to top off the water tank at every opportunity to avoid the possibility of running short of fresh water.

When connected to a dockside water supply, turn OFF the DC power switch for the water pump.

When your boat is to be left unattended for long periods of time, pump the water tank dry to prevent water from becoming stagnant and distasteful. If it becomes necessary to disinfect the fresh water system, ask your dealer about treatment systems and follow the manufacturer’s instructions.
Water Heater

Please read the manufacturer’s instructions supplied in your yacht’s owner’s packet. The water heater is connected to the AC power system. The water heater and the water heater shutoff valve can be accessed through the inboard bulkhead access panel in the mid berth (see photo below). The heat exchanger system is connected to the port engine. Check all hoses related to this system often for condition and leakage.

![Diagram of water heater and related components]

**WARNING**

**SCALDING HAZARD!** Water heated by the heat exchanger system can reach temperatures high enough to scald the skin. Use care when using hot water after running the port engine for any period of time.

**COMPONENT DAMAGE HAZARD!** Water heaters must be kept full of water to avoid damage to the 110-volt heating elements. They should also be drained (power turned OFF) when the possibility of freezing exists.

Gray Water Drain System

The sinks and showers (“gray water”) drain overboard. The sinks are above the water line and have gravity drains while the showers are pump-drained. The forward shower drain sump pump is located under the floor cutout at the bottom of the salon to forward berth stairs. The aft shower drain sump pump is located under the carpeted settee shelf on the aft bulkhead in the aft berth. This sump pumps automatically shut off after the shower is drained.

![Diagram of gray water drain system]
The marine head system is designed so that waste may be flushed into a holding tank or overboard (where regulations permit). Routing is decided by the setting of “Y” valves. Access to the forward head “Y” valve is through the floor cutout at the bottom of the salon to forward berth stairs. Access to the aft head “Y” valve is through the carpeted settee shelf on the aft bulkhead in the aft berth. (See photos on previous page)

Empty the holding tanks by dockside pump-out or, where permitted, by actuating the macerator pumps from the lower helm DC panel.

The holding tanks on your yacht have level indicators. Even so, empty the tanks at every opportunity to eliminate the possibility of problems which might be caused by an indicator error. The forward dockside discharge fitting is located on the starboard side of the deck and the aft dockside discharge fitting is located on the starboard side of the aft deck (see the illustration above).

Check with local authorities for regulations regarding the legal use of marine head systems in your area.
Air Conditioning/Heating (Option)

Your yacht may be equipped with an optional air conditioning system. Both heating and cooling are controlled from the same panel. Please refer to the manufacturer's operating instructions included in your yacht's owner's packet.

The water pickup sea strainer should be checked periodically for debris.

Audio/Video Equipment

The standard and optional audio/video equipment on your yacht have separate brochures explaining their operation. **NOTE:** AM radio reception may be impaired anytime the engine is running.

110-Volt AC/12-Volt Refrigerator

Your yacht may feature a 110-volt AC/12-volt DC refrigerator. Please refer to the manufacturer's instructions supplied in your yacht's owner's packet. The refrigerator operates on 12-volt DC power unless the 110-volt AC system is hooked up to shore power and the AC refrigerator breaker is ON.

**NOTICE**

In less than 24 hours, the refrigerator can render a 100-amp battery useless for engine starting. When operating on 12-volts, it is advised that the cold setting not be set higher than two (2). It is also advisable to turn off your refrigerator at night or when not in use. If you are going out for more than a day and cannot connect to dockside power, plan to run the engine each day to maintain a charged battery.

Microwave Oven

Before attempting to operate the microwave oven, make sure the breaker switch on the AC master panel is ON. Operating instructions for the microwave oven can be found in your yacht's owner's packet.
Liquid Propane Gas Stove

Your yacht may come equipped with a liquid Propane Gas (LPG) three-burner stove/oven. Before attempting to operate the LPG stove/oven, read the operating instructions included in your yacht’s owner’s packet.

**DANGER**

EXTREME FIRE/EXPLOSION HAZARD - LPG is heavier than air; if allowed to settle, accumulate, and if ignited, WILL CAUSE AN EXPLOSION!

**WARNING**

FIRE/PERSONAL INJURY HAZARD - Areas near burners and grates may become hot enough to cause burns. DO NOT touch burners, grates or areas near the units as they may be hot, even when they are dark in color. During and after use, do not touch or let clothing or other flammable material come in contact with units or areas near the units (burner tops, main frame sides and back, searails and pot holders) until they have had sufficient time to cool.

Always have an approved ABC-type fire extinguisher in galley area.

**LPG System Operation Summary**

1. Close the tank valve immediately in any emergency. The LPG tank is located in the dunnage box on the aft deck. Be sure all appliance valves are closed before opening the tank valve.
2. Always apply a lit match or other flame source to burner before opening burner valve.
3. Close the tank valve whenever appliance is not in use.
4. Test the system for leakage at least twice a month in accordance with the following procedure:
   - With appliance valves CLOSED and with tank valve OPEN, note the pressure on gauge.
   - CLOSE the cylinder valve. If the pressure reading on the gauge drops, THERE IS A LEAK IN THE SYSTEM!
   - Locate the leak by applying liquid detergent or soap and water solution to all connections.
   - NEVER use flame to check for leaks!
   - After the leak has been repaired, re-check the system before using appliances.
Electrical Systems
We strongly recommend that you read and understand this section and the Electrical Section of the Owner’s Manual. Wiring diagrams are provided in CHAPTER 4 for use in troubleshooting electrical problems.

⚠️ DANGER

⚠️ ⚠️ ⚠️ EXTREME FIRE/EXPLOSION HAZARD!

- To minimize the risks of fire and explosion, NEVER install knife switches or other arcing devices in the fuel compartments.
- NEVER substitute automotive parts for marine parts. Electrical, ignition and fuel system parts were designed and manufactured to comply with rules and regulations that minimize risks of fire and explosion.
- DO NOT modify the electrical systems or relevant drawings.
- Only qualified personnel should install batteries and/or perform electrical system maintenance.
- Insure that all battery switches are in the OFF position before performing any work in the engine spaces.

⚠️ WARNING

⚠️ ⚠️ ⚠️ FIRE/EXPLOSION HAZARD!

- Fuel fumes are heavier than air and will collect in the bilge areas where they can be accidently ignited. Visually and by smell (sniff test), check the engine and fuel compartments for fumes or accumulation of fuel. Operate the bilge blowers for at least four minutes prior to engine starting, electrical system maintenance or activation of electrical devices.
- Minimize the danger of fire and explosion by not exposing batteries to open flame or sparks. It is also important that no one smoke anywhere near the batteries.

⚠️ CAUTION

⚠️ ⚠️ ⚠️ SHOCK/ELECTRICAL SYSTEM DAMAGE HAZARD!

- Never disconnect the battery cables while the engine is running as this can cause damage to your boat’s electrical system components.
- The battery charging systems (alternators and battery charger) on your yacht are designed to charge conventional lead-acid batteries. Before installing gel-cell or other new technology batteries, consult with the battery manufacturer about charging system requirements.

NOTICE

- Electrical connections are prone to corrosion. To reduce corrosion caused electrical problems, keep all electrical connections clean and protect them with a spray-on protectant such as Corrosion Guard®.
- VOLTAGES - All boats use either 110-volt AC/60 Hertz, 240-volt AC/60 Hertz or 220-volt AC/50 Hertz single phase systems, and 12-volt DC or 24-volt DC. Electrical distribution panels are labeled with voltage and frequency of AC and DC.
12-Volt DC System

Fuses and Circuit Breakers

The fuses and circuit breakers for engines, accessory power and windlass power are located on the DC main distribution panel in the AC/DC cabinet (located next to the aft berth steps in the aft salon on the starboard side).

Battery Switches and Main Circuit Breakers

A separate rotary battery switch is provided for each battery. The battery switches are located at the lower helm, in the cabinet under the shift/throttle levers (see illustration and photo on right). In addition, a parallel switch is provided at each helm to enable you to start the engines using all engine batteries in the event that engine battery power is low. The accessory main circuit breaker and the windlass main circuit breaker are both located next to the battery switches.

An accessory fuse block for electronics, such as the VHF radio, is located under the upper helm station dash. Some equipment, such as depth finders and shower pumps may have secondary fuse protection at the unit.
Batteries
The batteries supply you with electricity for lights, engine and generator starting, as well as power to turn on accessories. Periodically remove the battery caps and check the electrolyte level. If the zinc plates are exposed, add distilled water until they are covered. Corroded battery terminals can be cleaned with baking soda and water. After cleaning the terminals, coat them with a light film of grease. Be sure all battery connections are tight.

Battery condition can be checked on the “Electrical System Monitor” located on the DC Distribution panel. The condition of the accessory battery can be read on the starboard engine voltmeter when the accessory battery switch is in the ON position. The starboard voltmeter will register the accessory battery state even when the engines are shut down and the ignition switches are turned off.

Engine Alternators
The engine alternators will maintain proper charge levels in the batteries (some situations may require running engines at 1200 RPM to initiate charging)

Battery Charger
The battery charger has a separate brochure, in your yacht’s owner’s packet, that explains its operating features. We strongly suggest that you read the operating instructions before using the battery charger. The battery charger can be accessed through the inboard bulkhead access panel in the mid berth (see photo on right). The battery charger will charge the batteries whenever the boat is plugged into 110-volt shore power or whenever the generator is operated. The circuit breaker for the battery charger, located on the main AC power panel, must be in the ON position for charging to occur.

⚠️ CAUTION
The battery charging systems (alternator and battery charger) installed are designed to charge conventional lead-acid batteries. Before installing gel-cell or other new technology batteries, consult with the battery manufacturer about charging systems requirements.
110-Volt AC System
The AC system is energized by either shore power or an onboard generator. Master Circuit breakers, for power source selection, are on the AC panel (starboard side of the salon). This system is designed so that ship's power and shore power sources cannot supply power simultaneously.

⚠️ CAUTION
Whether using shore power or the generator (option), the simultaneous use of several AC components can result in an overloaded circuit. It may be necessary to turn off one or more accessories in order to use another accessory.

⚠️ CAUTION
WATER HEATER DAMAGE HAZARD! - Do not energize the water heater electrical circuit until the heater is COMPLETELY filled with water. Even momentary operation in a dry tank will damage the heating elements. Warranty replacements WILL NOT be made on elements or tank damaged in this manner.

Shore Power
Shore power receptacle(s) are located outside the cabin on the starboard side. Shore power receptacles are rated either 30 or 50 amps with appropriate power cords furnished. Since not every shore installation has 30 amp service, we recommend that 15 and 20 amp adapters be purchased. However, whenever 15 or 20 amp adapters are used, there will be a corresponding drop in supplied power from the dockside system.

⚠️ DANGER
FIRE/EXPLOSION/SHOCK HAZARD!
- To minimize shock and fire hazard, DO NOT modify electrical systems or relevant drawings.
- DO NOT alter shore power connectors and use only compatible connectors.
- Only qualified personnel should install batteries and/or perform electrical system maintenance.
CAUTION

SHOCK/ELECTRICAL SYSTEM DAMAGE HAZARD!
- Never connect dockside power to your boat outside North America unless you have purchased the International electrical conversion option, which is rated for 220-volt/50 Hertz. North American systems are rated for 110-volt/60 Hertz power.
- Use double insulated or three-wire protected electrical appliances when possible.

NOTICE

- When using shore power, the simultaneous operation of several AC accessories can result in an overloaded circuit. It may be necessary to turn off one accessory while operating another.

Before connecting to shore power, ensure all breakers and switches on the AC master panel are in the OFF position. Always attach the shore power cord to the boat inlet first; then to the dockside connection to prevent shock or injury from an accidental dropping of the “hot” cord into the water.

WARNING

SHOCK/ELECTRICAL SYSTEM DAMAGE HAZARD!
Monitor the electrical control panel’s polarity indicators when connecting shore power to your boat. A GREEN light illuminating after the power cord is plugged into the boat’s external power receptacle indicates acceptable electrical power in which you may energize the main breaker switches. A RED light, however, indicates reversed polarity, which could cause electrical system damage and possibly electrical shock injuries. In this case, DO NOT energize the main breaker switches. Instead, immediately disconnect the shore power cord (always from the dockside outlet first) and notify marina management.

On yachts with a single dockside inlet, check for proper polarity as outlined in the previous warning. Activate the AC system by first turning on the master breaker, then each individual component breaker as required.

On yachts with optional dual dockside inlets, check for proper polarity as outlined in the previous warning. Each dockside inlet is labeled above the weatherproof cover, line 1 or line 2, which corresponds to the line each operates on the AC master panel. This system is designed so that each line operates independent of each other. Activate the AC system by first turning on the master breakers, then each individual component as required. Voltage on each line can be read by setting the voltmeter selector switch.

Generator (Option)
Your yacht may come equipped with a generator. Prior to initially operating your generator we strongly urge you to read the manufacturer’s operating instructions included in the owner’s packet. Always observe the following:
- Follow instructions in the generator manual for pre-start checks and break-in procedures.
- The starter switch is on the AC electrical panel (located on the starboard side of salon).
1. Open the generator seawater intake valve before starting the generator. The seawater intake valve must remain open during generator operation, and the seawater strainer should be checked frequently for leaks and/or debris.
2. Operate the bilge blowers for a minimum of four minutes before starting the generator. Leave the blowers on while the generator is operating unless the yacht is running at cruising speed.
3. Diesel generator: turn the pre-heat switch to the ON position and allow one minute for pre-heating.
   Gas generator: simultaneously press the oil pressure button and turn the starter switch until the generator starts.
4. Turn the Starter switch to start, releasing it as soon as the generator starts. NEVER operate the starter for more than 30 seconds. If the generator does not start, wait at least 30 seconds before another start attempt is made.
- If your fuel system features a fuel management board (located on the forward bulkhead in the engine room) fuel to run the generator is supplied from either the port or starboard fuel tanks (see the fuel system diagrams in the next section).
NOTICE

Environmental Hazard - If your boat features a diesel fuel system and a fuel management board; the generator fuel selector valves MUST be set so that return fuel is routed back to the same tank from which it was drawn. Otherwise, generator fuel drawn from a partially full tank and returned to a full tank may spill overboard through the tank venting system.

- If your fuel system does not feature a fuel management board, fuel to run the generator is supplied from the starboard fuel tank (see the fuel system diagrams in the next section).
- In addition to servicing the filters attached to the diesel generator, the filter/separators located near the fuel line valves should be serviced as described in the manufacturer's operating manual.
- The coolant mixture installed at the factory consists of equal parts of water and antifreeze (Ethylene Glycol).
- Oil pressure and water temperature gauges are adjacent to the AC panel and monitor the engine functions of your generator. Gauge readings during normal generator operation are: Temperature between 165° to 195° F; Oil pressure between 35-55 PSI.

To activate the AC system under generator power; switch the generator master circuit breakers to ON and then turn on each individual component breaker as required.

EXPRESS LIMITED WARRANTY

BAYLINER MARINE CORPORATION, EXPRESS LIMITED WARRANTY
Limited Warranty for New 2000 or 2001 Model Year Motor yachts
(3388, 3788, 3988, 4087, 4788, 5288 and 5788)
Bayliner warrants to the first retail purchaser ("Owner") of a new 2000 or 2001 Model Year Bayliner Motor yacht (3388, 3788, 3988, 4087, 4788, 5288 and 5788) purchased from an authorized dealer, operated under normal, noncommercial use, that the selling dealer will (or, in Bayliner’s discretion, it will):
1. repair or replace any parts found to be defective in materials and workmanship occurring within 1 (one) year of the date of delivery;
2. repair any defects in materials and workmanship in structural fiberglass parts of the hull (and specifically excluding the deck) occurring within 7 (seven) years of the date of delivery; and
3. repair any defects in materials and workmanship that result in osmotic blistering of the exterior gel coat surface of the hull laminate occurring within 5 (five) years of the date of delivery, except that Bayliner shall not be liable or responsible to correct, repair, or replace any damage from osmotic blistering if the original gel surface has been altered in any way, including repair or application of any coating other than marine anti-fouling bottom paint or improper surface preparation for paint, or excessive sanding or sandblasting. Bayliner shall repair osmotic blisters based upon customary and reasonable charges with the method and extent of repair subject to Bayliner’s prior approval.

Owner’s sole and exclusive remedy for defects covered by this limited warranty shall be the repair or replacement, at the option of Bayliner, of the defective part or component. THE REMEDY DESCRIBED IN THIS LIMITED WARRANTY SHALL BE THE SOLE AND EXCLUSIVE REMEDY PROVIDED BY BAYLINER.

Terms and Conditions
This limited warranty is subject to the specific terms and conditions set forth below.

In order to receive this limited warranty coverage, Bayliner must receive the limited warranty registration card from the authorized selling dealer within 30 days of delivery of the Motor yacht. Receipt by Bayliner of the limited warranty registration card is a condition to the processing of a warranty claim. All repairs under the terms of this warranty are subject to pre-approval from Bayliner service personnel. Employees of Bayliner dealers are not authorized to make warranties or approve warranty repairs other than those set forth herein.

To obtain warranty service, the Motor yacht, including any allegedly defective part, must be returned to the authorized Bayliner dealer from whom the Motor yacht was purchased within the applicable warranty period. All warranty repairs must be performed at the Bayliner dealer’s facilities or, at Bayliner’s discretion, at an authorized Bayliner repair facility.

The Owner is responsible for all expenses associated with transporting the Motor yacht and/or defective part to and from the Bayliner dealer, expenses associated with hauling out, yard fees, and any other expenses associated with transferring the yacht to the Bayliner dealer or authorized Bayliner repair facility for warranty service.

What Is Not Covered
Bayliner shall not be responsible for any condition that may be affected by the Owner’s failure to use, maintain, or store the Motor yacht as specified in the Bayliner owner’s manual; and any other failure to provide reasonable care and maintenance.

Bayliner hereby assigns all warranties provided by the manufacturers and distributors of components and parts (including but not limited to engines, transmissions, outdrives, and appliances) for the Motor yacht to the Owner and Owner’s sole remedy for defects in components or parts subject to those warranties shall be the assertion of Owner’s rights against those manufacturers or distributors.

Bayliner shall have no liability or responsibility for any damage or expense, and no Bayliner warranty is provided for, the following:
A Motor yacht purchased from any party other than an authorized Bayliner dealer; a Motor yacht, including components and systems, that has been altered or modified from factory specifications; equipment and accessories (including engines) not factory installed by Bayliner; a Motor yacht used for commercial purposes; any components or parts (including but not limited to engines, transmissions, outdrives, and appliances) that carry their own warranties; damage or deterioration of cosmetic surface finishes, including cracking, crazing, discoloration, air voids, fading or oxidation of gel coat, wood finishes (varnishes, stains and paints), fabrics, vinyls, plastics, plated or painted metal and stainless steel finishes; anti-fouling bottom paint or zinc anodes; the cost to remove, disassemble or reinstall components not installed by Bayliner that require removal to access parts covered by this warranty; a Motor yacht which has been misused, operated in a negligent manner, used for racing or military purposes; operated without normal maintenance, operated contrary to any instructions furnished by Bayliner or its component suppliers, or operated in violation of applicable law or regulations; any representation or implication relating to speed, range, fuel consumption or estimated performance characteristics; window glass and windshield damage or breakage; damage, shrinkage, or deterioration of carpet, upholstery and exterior canvas tops, enclosures, and weather covers (including rainwater leakage); and any damage, cost, or expense caused by an act of nature.

Other Limitations
IN NO EVENT SHALL BAYLINER OR THE SELLING DEALER BE RESPONSIBLE FOR INDIRECT, INCIDENTAL, OR CONSEQUENTIAL DAMAGES (including but not limited to loss of time, loss of use, inconvenience, travel expense, transportation costs, towing, damage or loss of use of other property or equipment, loss of profits, and loss of contracts), WHETHER SUCH CLAIM OR ACTION IS BASED ON CONTRACT, WARRANTY, NEGLIGENCE, STRICT LIABILITY OR ANY OTHER TORT. Some states do not allow the exclusion of incidental or consequential damages, so the above limitation or exclusion may not apply to you.

This warranty gives the Owner specific legal rights, and the Owner may also have other rights which vary from state to state. This document contains the entire warranty given by Bayliner and there are no terms, promises, conditions or warranties, express or implied, other than those contained herein. ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING IMPLIED WARRANTIES OF FITNESS AND MERCHANTABILITY ARE EXPRESSLY EXCLUDED. TO THE EXTENT ALLOWED BY LAW, ANY IMPLIED WARRANTY OF MERCHANTABILITY IS LIMITED TO THE DURATION OF THIS WRITTEN WARRANTY. Some states do not allow limitations on how long an implied warranty lasts, so the above limitations may not apply to you. Bayliner specifically does not authorize any person to extend the time or scope of this warranty or to create or assume for Bayliner any other obligation or liability with respect to Bayliner Motor yacht.

Transferability
The unexpected portion of this warranty may be transferred to a second owner upon purchase of the Motor yacht from an authorized Bayliner dealer. A non-refundable recording fee of $250.00 must accompany any transfer request. Bayliner reserves the right to reject a warranty transfer request for a Motor yacht that has been damaged, neglected, or otherwise previously excluded from warranty. Bayliner will confirm all warranty transfers in writing to the dealer and the second owner. For further information regarding this limited warranty, please contact Bayliner at:
